The heart of your security management system
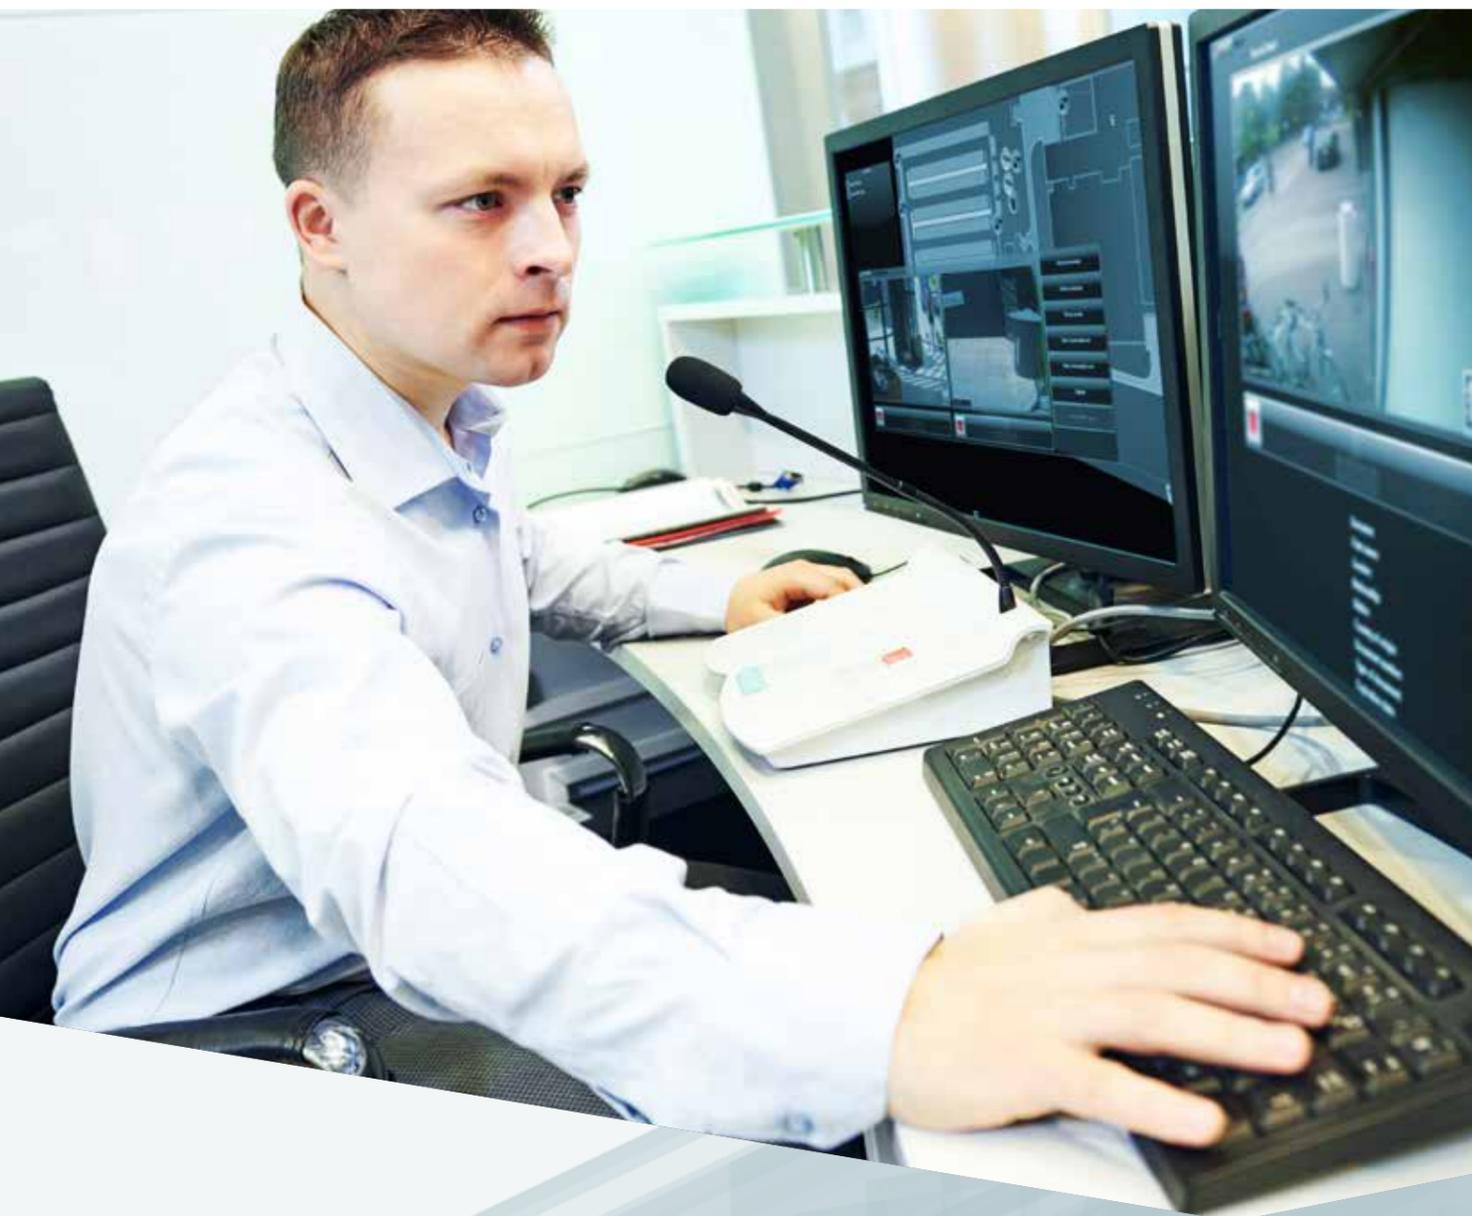

flinQ

To predict abnormalities and have
full control over every asset

Welcome on a journey through the world of security management where threats and risks are growing and changing all the time. Security systems have grown over many years as a result of the autonomous procurement of individual access control, fire, intruder alarm, CCTV systems and other security devices. Meanwhile however, they have become inflexible. They are just stand-alone silos of information that, faced with a major incident, cannot perform as a cohesive command and control system.

Flexposure was the first to recognize the need for a flexible and open integration platform in order to solve the arisen operational and integration challenges. They created a 'tool' to command and visualize all autonomous and related systems in one user-friendly environment, called FlinQ. By centralizing every component of your security system onto this single easy-to-use touch-screen platform, a straightforward and reliable security management solution with access from all over the world can be created easily.

In the world of security management it is all about tomorrow's needs. Therefore with every new release FlinQ proves to be always one step ahead. Features from the gaming industry have been adopted to optimize operator performance through high speed and rich graphics. The optimized graphical user interface improves situation-specific screens.

FlinQ: always the next level of integration

Streamlined and centralized security

a bridge between users and their assets ◄

one user-friendly interface for all relevant services ◄

easy operation based on computer game technology ◄

step-by-step incident management ◄

clearly designed maps of exact locations ◄

FlinQ enables users with an application-specific management system to streamline networks for particular purposes, for example in public, healthcare or commercial sectors.

The innovative FlinQ platform is a scalable and modular solution based on open standards. This means that you only have to select the components you need in order to integrate FlinQ into your network. While FlinQ centralizes your system, it also puts you on the right track for integrating and using the latest IP security technologies, now and in years to come. And last but not least, FlinQ's alarm management system ensures minor mishaps don't escalate into calamities.

FlinQ - independent Security Management Platform

ready for tomorrow's questions ◄

control through one interface ◄

open, brand and product independent ◄

remote access ◄

simple and intuitive ◄

► FlinQ is an open and flexible integration platform perfectly adjustable to both small and large operations. FlinQ brings access control, video surveillance, intrusion detection and intercom at your fingertips. The open and accessible interface allows an easy control and unparalleled situational awareness.

The graphical user interface (GUI) combines insights from the gaming industry and touch-screen technologies and offers an innovative and intuitive approach to security management.

Users can manage their systems from any location. Because of its simplicity, FlinQ is fun to use and very easy to learn. It improves the overall efficiency of your security system and helps reducing operational costs.

FlinQ - tailor made solutions

in-house software by Flexposure ◄

can be adapted seamlessly to specific situations ◄

improves efficiency and brings down costs ◄

centralization through one platform ◄

open brand and product independent ◄

► Every security situation is unique having its own needs and set of requirements. Thanks to the versatile software and the modular design, FlinQ can be adapted seamlessly to your specific situation. All software is developed in-house by the Flexposure Software Labs, so ordering from Flexposure is ordering directly from the source. FlinQ works great on all MS-Windows platforms. Centralization through one platform not only improves the efficiency but also helps controlling the costs.

FlinQ - analysis

excellent management tool ◄

easy access to customized reports ◄

getting new insights in security management ◄

► FlinQ will offer a portal to provide dynamic reports, anytime, anywhere. The possibilities of online analytics are almost endless and according to your wishes, all reports from FlinQ can easily be shared. In this way a lot of (marketing, operational, service and asset management) information becomes available to improve your processes and business results.

FlinQ - support

▶ It goes without saying that for an optimal functioning of the FlinQ platform, adequate support is provided. The Flexposure helpdesk will give you all the support you need 24/7. Through direct connection and smart reporting capabilities we can actively monitor your systems around the clock. In this proactive manner we can even intervene before failures occur. Flexposure can provide consultancy services to deploy the FlinQ system at the customer location and configure it to the customer needs.

Let's meet

There is much more to tell and to show you, so let us take you on an exciting security trip. We guarantee wonderful new views on today's security management. Be curious and join us. We went on this adventure with many of your colleagues and no one regretted participating. See you soon!

FlinQ features and benefits

→ **Extensive integrations with access control, video surveillance, intrusion detection, intercom communication and more**

→ **Open architecture, brand and product independent**

→ **Fast, efficient and intuitive single interface (multi touch)**

→ **Adding additional sites is fast and easy**

→ **Add additional functionalities quickly and easily**

→ **Quick visualization of situations and response time**

→ **Advanced maps show specific situations**

→ **Highly rated by users because of high efficiency**

→ **Overall control from one single user-friendly platform**

→ **Provides a simple and very reliable management tool**

→ **Consistent and clear reports**
